— GENERATIVE AI · PROFESSIONAL PROGRAM

Generative Artificial Intelligence

An eight-week, mentor-led journey from Python foundations to production-ready GenAI systems — built on real projects, not slideware.

PROJECTS

THE PROGRAM

Introduction to Generative AI.

Generative AI is the branch of artificial intelligence that creates — producing text, images, code and ideas rather than merely classifying them. At its core sit large neural networks that learn the patterns of language and data, then generate new, coherent output in response to a prompt.

This program is your complete introduction to that world. Over eight focused weeks you build the full modern Generative AI stack — from Python and the mathematics beneath neural networks, through CNNs, transformers and large language models, to Retrieval-Augmented Generation, autonomous agents and cloud deployment.

Every week pairs theory with practice and closes with a working application you keep. You will train and reason about models, engineer prompts that hold up under pressure, wire embeddings into vector databases, and orchestrate multi-agent systems with LangGraph and CrewAI — shipping each behind FastAPI and Streamlit the way real teams do. You graduate with a portfolio of eight projects and the fluency to architect, build and deploy enterprise-grade GenAI systems.

“

*We're
entering a
new world
in which
data may
be more
important
than
software.*

major
capstones.

WHO IT'S FOR · WHY VTS

Built for the people who intend to *build the future.*

WHO SHOULD ENROL

Whether you are changing careers or sharpening an existing edge, this program meets you where you are — with extra foundational exercises for those new to programming.

Aspiring AI Engineers

Graduates and developers targeting GenAI and ML roles.

Working Software Engineers

Move beyond theory to ship real LLM applications.

Analysts & PMs

Turn data and models into decisions and products.

Career Changers

A beginner-friendly on-ramp into the AI industry.

No prior programming experience required. The first two weeks establish Python, mathematics and data fundamentals before the pace lifts.

WHY LEARN AT VIKASH TECH SOLUTION

Mentor-led, live cohorts

Real-time instruction from practitioners who build GenAI for a living — not pre-recorded video.

Project-first curriculum

Eight shipped applications. You learn by building, then explaining what you built.

1-to-1 assistance

Personal guidance through difficult concepts, debugging and architecture decisions.

Placement & interview prep

Mock interviews, portfolio reviews and dedicated placement support.

The *foundation* phase.

WEEK 1	FOUNDATIONS Python & AI Foundations MINI PROJECT
TOPICS COVERED AI / ML / DL / GenAI Python Basics Variables Data Types Loops Functions Lists Dictionaries File Handling	PROJECT AI Study Assistant CLI — Enter a topic and store structured notes — Search across saved notes — Persist everything to file
OUTCOME Python fundamentals, learned while building a first working application.	
WEEK 2	DATA & MATH Mathematics, NumPy, Pandas & DL Basics MINI PROJECT
TOPICS COVERED Linear Algebra Probability NumPy Pandas Neural Networks Backpropagation	PROJECT Student Performance Predictor — Read and clean CSV data — Analyse marks and generate insights — Predict performance outcomes
OUTCOME Data preprocessing fluency and a working mental model of the AI data pipeline.	
WEEK 3	DEEP LEARNING CNNs, RNNs, Autoencoders & VAEs MINI PROJECT
TOPICS COVERED CNN RNN LSTM GRU Autoencoders Variational Autoencoders	PROJECT Image Compression Tool — Compress images via learned representations — Compare original vs. reconstructed size — Visualise the reconstruction
OUTCOME Intuition for latent spaces and representation learning.	

Into *generative* architectures.

WEEK

4

GENERATIVE ARCHITECTURES GANs & Transformers

MINI PROJECT

TOPICS COVERED

GAN Architecture

DCGAN

StyleGAN Overview

Attention Mechanism

Transformer Architecture

Tokenization

PROJECT

Text Summarizer with Transformers

- Input long-form text
- Generate concise summaries
- Compare output quality across settings

OUTCOME A working command of the transformer workflow that powers modern LLMs.

WEEK

5

LARGE LANGUAGE MODELS LLMs & Prompt Engineering

MINI PROJECT

TOPICS COVERED

BERT

GPT

T5

LLaMA

Prompt Engineering

Fine-Tuning Concepts

PROJECT

AI Content Generator

- Generate blog posts and articles
- Draft emails on demand
- Produce social-media copy

OUTCOME Real-world LLM API usage and prompt design that holds up in production.

WHAT CHANGES FROM HERE

Weeks 6 and 7 shift from learning components to *shipping* systems. Each runs as a six-day build sprint, mirroring how production GenAI teams plan, integrate and deploy — ending in a working, deployed application.

From components to *deployed systems*.

WEEK 6	RETRIEVAL-AUGMENTED GENERATION RAG, Embeddings & Vector Databases		MAJOR PROJECT
	TOPICS COVERED Embeddings ChromaDB FAISS LangChain RAG Pipeline	SIX-DAY DELIVERY PLAN DAY 1 Embedding Pipeline DAY 2 Vector Database DAY 3 Retriever DAY 4 LLM Integration DAY 5 Testing DAY 6 Deployment	PROJECT Enterprise PDF Chatbot — Upload and index PDF documents — Semantic document search — Context-aware, grounded answers
OUTCOME An industry-standard Retrieval-Augmented Generation application.			

WEEK 7	AGENTIC AI & DEPLOYMENT Diffusion Models, Agents & Deployment		MAJOR PROJECT
	TOPICS COVERED Stable Diffusion HuggingFace Diffusers AI Agents CrewAI LangGraph FastAPI Streamlit	SIX-DAY DELIVERY PLAN DAY 1 Agent Design DAY 2 Research Agent DAY 3 Summariser DAY 4 Report Gen DAY 5 Communication DAY 6 Deployment	PROJECT Multi-Agent Research Assistant — Autonomous web-research agent — Summariser agent — Report-generator agent
OUTCOME A working implementation of orchestrated, agentic AI.			

The *capstone*.

RECOMMENDED BUILD

Enterprise Document Intelligence Platform

A production-grade system that ingests documents, reads them with OCR, retrieves grounded answers through RAG, and coordinates a multi-agent workflow — served by a FastAPI backend and a Streamlit front end.

PDF Upload

OCR

RAG Search

Chat Interface

Report Generation

Multi-Agent Workflow

FastAPI Backend

Streamlit Frontend

CHOOSE YOUR CAPSTONE

RECOMMENDED

OPTION 01

Enterprise Document Intelligence Platform

OPTION 02

OPTION 03

Resume Analyzer

OPTION 04

Customer Support AI Agent

SIX-DAY CAPSTONE SCHEDULE

DAY 1

Architecture
Design

DAY 2

Backend
Development

DAY 3

RAG Integration

DAY 4

Frontend
Development

DAY 5

Testing &
Optimisation

DAY 6

Presentation &
Mock Interview

WHAT YOU WALK AWAY WITH

Eight projects. One *portfolio*.

PORTFOLIO COMPLETED

01 AI Study Assistant	02 Student Performance Predictor
03 Image Compression Tool	04 Transformer Text Summarizer
05 AI Content Generator	06 Enterprise PDF Chat bot
07 Multi-Agent Research Assistant	08 Document Intelligence Platform

BY THE END, YOU WILL BE ABLE TO

- ✓ Build AI applications from scratch
- ✓ Implement Retrieval-Augmented Generation
- ✓ Design and deploy autonomous AI agents
- ✓ Create production-ready GenAI projects
- ✓ Work fluently with large language models
- ✓ Orchestrate systems with LangChain
- ✓ Deploy applications with FastAPI & Streamlit
- ✓ Prepare for GenAI interviews and roles

THE VIKASH TECH SOLUTION APPROACH

Learn live. Build real. Get hired.

“We don’t teach Generative AI from slides. We build it together, in the open — one project at a time — until the work itself becomes second nature.”

VIKASH TECH SOLUTION

MENTOR-LED PROGRAMS IN GENAI & FULL-STACK
ENGINEERING

HOW WE DELIVER**Live, interactive cohorts**

Six days a week, two hours a day — taught in real time.

1-to-1 mentor assistance

Personal support through concepts, debugging and design.

Project-driven mastery

Knowledge proven by what you ship, every single week.

Placement assistance

Mock interviews, portfolio reviews and hiring support.
